PL 473 Environmental Impact of Projects
The course explains in which ways are urban planning and development influenced by technology in relation to existing physical and social structures. The course looks at e-business and e-government and the way digital communication can improve citizen life and engagement in urban processes. In general, this course can be divided into four parts: Technology and society (society in the networked environment information, the social effects). Technology and planning (modelling of urban areas, urban spatial structure). Technology and spatial place (private and public space, local and global development). Technology and management (e-government, management of information networks, public participation in the information age).
